Laboratories

Fort McMurray Laboratory Expansion

AGAT Laboratories is proud to announce the opening of its laboratory in Fort McMurray. Our newest laboratory is located in the heart of the Energy Sector Oilsands operations in Alberta and will offer clients in the area a full service experience through multidivisional operations and an integrated approach to laboratory services.

The laboratory provides access to a complete scope of services from our Oilsands, Oil & Gas Chemistry, Environmental, Air Quality Monitoring and Tribology divisions.

The goal of this laboratory is to consolidate our 30 years of Energy and Oilsands industry experience and provide a more direct client focused approach to our services. AGAT Laboratories' experience in both organic and inorganic environmental chemistry as well as all related air monitoring services will be a valuable service to assist in the continued "Green" development of Alberta's Oilsands Resources.

Expanding into Fort McMurray, along with our recent expansions in Calgary, Terrace, Edmonton, Vancouver, Kelowna and Whitehorse not only marks us as the laboratory company with the largest western presence in Canada, but as a strong overall supporter of local communities by making investments and job creation commitments throughout Alberta and Canada. AGAT continues to invest into the local economies and supports local jobs, businesses and the communities we operate in. AGAT Laboratories has already joined the Fort McMurray Chamber of Commerce in preparation to becoming an active community supporter.

AGAT Laboratories, founded in Western Canada, continues to strengthen its operations throughout Canada and remains at the forefront of developing Canadian Science Technology.
