Edmonton Laboratory Expansion

AGAT Laboratories is proud to announce the expansion of its environmental facilities in Edmonton, Alberta. Our 30,000 square foot laboratory will house the most modern and state of the art technology available in the laboratory industry. The development of this laboratory strengthens our Western Canadian presence and augments our geographical diversity across Canada.

This laboratory development is in response to increased demand and growth in the heartland of the Canadian Oil and Gas industry, allowing us to expand our services to current clients while offering opportunities for new business relationships. The significant size of this laboratory, supplemented by our network of environmental laboratories in Northern and Southern Alberta, will support large volumes of work at expedited turn-around times. The Edmonton laboratory will be a full service Environmental laboratory, and will operate as a sample reception and bottle pick-up location for all of our scientific divisions which include Environment, Ultra Trace, Agriculture, Air Quality Monitoring, Food Analysis, Mining Geochemistry, Tribology, Oil and Gas Chemistry, Oilsands, Geology and Petrology, Routine Core, and Reservoir Engineering.

Construction is underway and the laboratory will be fully operational in the spring of 2010.

Brian Brunetti, P.Eng.
Executive Vice President
